ACHTUNG: Transparent von BOTZ immer sehr dünn auftragen, sonst milchig!
Auftragsdicke, Temperatur oder Ofenatmosphäre können u.a. das Brennergebnis beeinflussen.

CAUTION: apply BOTZ Transpa- rents very thinly, otherwise milky!

Layer thickness, temperature or kiln atmosphere, among others, can influence the firing result.

Craqueléglasuren dünn (1–2 mal) auftragen. Brennen bei ca. 1050°C. Nach dem Abkühlen Risse mit Tusche oder starkem Tee einfärben. Für ein grobes Netz bald einfärben, für feineres Craquelé bis zu einer Woche warten.

Apply crackle glazes in thin layers (1–2 times). Fire at approx. 1050°C. Colour cracks with ink or strong tea after cooling. For a coarse net, apply ink at an early stage, for a finer crackle, wait up to one week.

Klare opake Farbtöne im neuen Trend: innovative Glasurentwicklung verbindet hier Leuchtkraft mit erstklassiger glänzender Oberfläche. Alle Farben sehr intensiv auch auf dunklen Tönen, sie schmelzen besonders glatt aus und neigen auch im höheren Brennbereich bis 1100°C nicht zum Abfließen.

Clear opaque colour shade in the new trend colours: Innovative glaze development here combines luminosity with a first-class glossy surface. All colours are very intensive on dark clays, they melt particularly smoothly and do not tend to run off even at a higher firing range up to 1100°C.

Bei den Rottönen bitte beachten:
9601 – 9604, 9610: dick auftragen,
locker setzen, nicht über 1040°C
brennen!
9606, 9607, 9596 und 9597:
Sauerstoff im Brand zuführen!

For red colours, please observe:
9601 – 9604, 9610: apply in a
thick layer, set loosely, do not
fire above 1040°C!
9606, 9607, 9596 und 9597:
Add oxygen during firing!
